Quantum Statistical Physics of Molecular Systems

František Šanda

Contents

I Quantum statistical ensembles 5

1 Quantum models in biophysics and chemical physics 5
- 1.1 Nuclear spins . . . 6
- 1.2 Molecular vibrations . . . 7
- 1.3 Electronic states . . . 8

2 Density matrix 10
- 2.1 Statistical ensembles . . . 10
- 2.2 Statistical operator . . . 11
- 2.3 Pure and mixed states . . . 13
- 2.4 Populations and coherences . . . 15
- 2.5 Wave function collapse . . . 16
- 2.6 Liouville-von Neumann equation . . . 19

3 Quantum-classical mapping 21
- 3.1 Bloch sphere . . . 21
- 3.2 Wigner function . . . 22
- 3.3 Quasiclassical evolution . . . 28
- 3.4 Wigner-Weyl transform * . . . 30
- 3.5 Bohr-Sommerfeld quantization . . . 35

4 Quantum statistics at equilibrium 38
- 4.1 Canonical density matrices . . . 38
- 4.2 Spaces of symmetrized wave functions . . . 39
- 4.3 Boson condensation . . . 41
- 4.4 Fermi-Dirac & Bose-Einstein distribution . . . 43
- 4.5 Gibbs paradox . . . 45
- 4.6 Quasiparticles* . . . 47

II Noise and dissipation in quantum dynamics **55**

5 Emergence of relaxation **55**
5.1 Von Neumann entropy 55
5.2 Unitary evolution 59
5.3 Reduced density matrix 62
5.4 Random Hamiltonian 67
5.5 Decoherence 69

6 Liouville space **71**
6.1 Superoperators 71
6.2 Hadamard formula 73

7 Quantum master equations **75**
7.1 Quantum semigroups 75
7.2 Lindblad form 77
7.3 Stochastic Liouville equations 80
7.4 Open quantum systems 84
7.5 Secular dynamics 91
7.6 Thermodynamics of quantum relaxation 96

III Molecules in optical fields **99**

8 Optical dynamics of two-level chromophore **99**
8.1 Bloch equations 99
8.2 Absorption 102
8.3 Line-shape theory * 104

9 Photon counting statistics **106**
9.1 Conditional density matrix 106
9.2 Photon arrival trajectories 108

10 And some spectroscopy * **111**
10.1 Multilevel Bloch equations 111
10.2 Transient absorption 113
10.3 Nonlinear response 115
10.4 Spontaneous emission 120
10.5 Two-photon absorption 125

A Probability - A brief history **127**
